Acoustically and Visually Enticing

Sound Shape is designed to acoustically enhance any multi-channel audio or home theater system. It is available in a variety of color and fabric options to compliment any decor.

The Look

The contemporary look of our 1' x 5' wall panels allow for more placement options, and with four different mounting options, Sound Shape panels can be attached to virtually any wall surface.

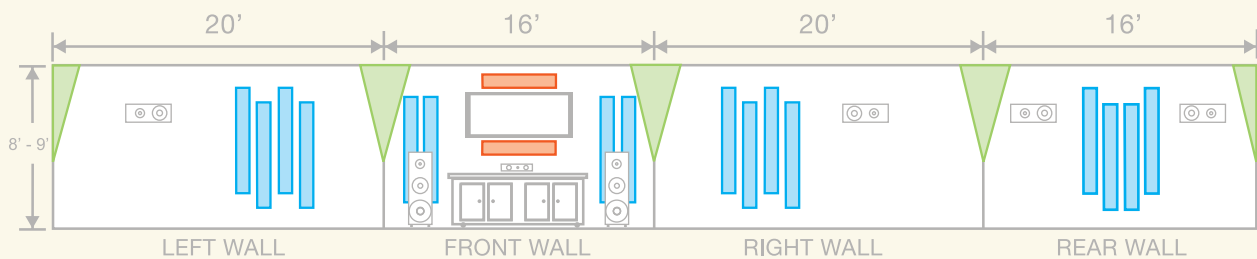

The Performance

Low bass frequencies tend to accumulate in corners, producing acoustic inaccuracies and listener fatigue. Our elegant 2' x 4' corner absorbers are specifically designed to reduce this effect, while our unique mounting system ensures a clean, tight fit against all surrounding surfaces. In addition, our 2" thick panels deliver superior absorption properties over all 1" systems.

The Flexibility

The Sound Shape Home Theater Kit is ideally suited to 220 - 320 square foot rooms. The Sound Shape expansion kit is available for larger listening spaces.
