

The real Peerless story.

Peerless was founded in Denmark in 1926. Vifa, also founded in Denmark, merged with Peerless in 2000 to form Danish Sound Technology (DST). In 2005 Tymphany acquired Danish Sound Technology (DST) along with the original Peerless, Vifa, and Scan-Speak brands, engineering, products, and technology. Since 2005, Peerless transducer technology has been a constant that has led to our [rich audio heritage](#) and success today. We are the world's only authentic manufacturer of Peerless drivers. Our Peerless audio products have been delivering premium sound for any application, and we have leveraged the Peerless audio technology platform to bring a consistent level of quality to all of our products.

In 2008 Tymphany opened a state-of-the-art, custom-built [transducer manufacturing campus in XinXu, China](#). In addition to Peerless, we've seen and built it all — using a wide range of technologies along the way. From Danish Sound Technology (DST) brands such as Scan-Speak and Vifa, Tymphany is built on a foundation of quality transducer engineering practices.
